Subject: Three week update CFAC April 04, 2016

On April 04, 2016 the DEQ received the most recent update from Carl Burnham of IRS Environmental on the quantity of Asbestos material removed from the CFAC site to date. The current cumulative total of 28,340 pounds of regulated asbestos waste remains steady from the last update. The waste disposal receipts for March indicate the removal of an additional 58,280 pounds of non-regulated asbestos material, yielding a "to date" non-regulated asbestos total of 722,770 pounds. Structures previously included in this removal include the West Rectifier, Rod Mill Building, Paste Plant, Quonset Hut, West Aluminum Unloader, and Compressor Building.

An asbestos project permit is in place through 2016 for the East Rectifier building, and through mid-May for the Laboratory Building. Demolition notifications remain in place for the East and West Rectifiers, Rod Mill Building, and Laboratory Building.
